

Acrylate copolymer contains some polar groups.

1) Typical Properties:

Modify the surface tension; Anti-pollution;

Function with leveling control agent;

Promote the lubrication of workpieces and fillings; Promote the leveling; Anti-crater;

Not include silicone oil; Promote leveling

2) Incorporation and Processing Instructions

The product should be mixed with the resin, hardener, pigments and other additives using a high-speed mixer and extruded along with all components.

3) Special Features and Benefits

Promote the lubrication of workpieces and fillings No influence on chemical properties.

4) Recommended Levels

0.5-1% additive (as supplied) based on the total formulation when extruding with all formulation components.

The above-recommended levels can be used for orientation

Optimal levels are determined through a series of laboratory tests.

5) Recommended Use

KC701B is used in all kinds of powder coatings.
